Medium Fidelity Prototype Read Me

Prototype link: https://marvelapp.com/d4454d

O's medium fidelity prototype is run using Marvel, a free webapp that turns sketches, images, and mockups into realistic mobile and web prototypes.

We used Sketch, an app that allows users to easily design web and mobile interfaces, to provide images that we linked in Marvel to create our app, O.

In order to interact with the prototype, please click anywhere on the displayed phone screen. If a valid click was performed on the interface, the appropriate screen will be displayed. Otherwise, the current screen will briefly highlight valid areas to click.

Tasks

The user may complete three tasks using our prototype:
1. Find an event nearby
2. Navigate to the event
3. Check in to or create an event

Help and Details

The app contains preloaded data about events to simulate real events in a Wizard of Oz style technique. Interact with these events as though another user has uploaded them.

When navigating to an event, you will notice that the map has special shaded colors.
- Orange patches represent areas or paths you have already traveled
- Red patches represent dangerous areas

When navigating to an event, click anywhere on the map to simulate arriving to your destination. Otherwise, the navigation task cannot be completed.
